Git & GitHub Practical Exam (Workflow-Based)

□ Scenario

You are a developer contributing to a shared project:

☞ **“Student Portfolio Project”**

Your instructor has created a **public repository**.
Your job is to:

- Create your own copy
- Work independently
- Add your content
- Submit your work professionally

□ PART 1: FORK & SETUP

◆ Task 1: Fork Repository

- Go to the instructor’s repository
- Create **your own copy (Fork)** in your account

📌 *Result:* You now own a separate version of the project

◆ Task 2: Clone Your Fork

- Download your fork to your computer

📌 *Result:* You now have a local working copy

□ PART 2: BRANCHING

◆ Task 3: Create Your Own Branch

- Create a new branch using your **name or student ID**

📌 Example:

- `zakaria-feature`
- `std123-profile`

📌 *Rule:*
You must NOT work directly on the main branch

□ PART 3: FILE CREATION & CONTENT

◆ Task 4: Add HTML File

Create a simple HTML page:

👉 File name: `index.html`

Content should include:

- Your full name
- Your course name
- A short description about yourself

◆ Task 5: Add Notes File

Create a file:

👉 `notes.txt`

Include:

- What you learned about Git
- Difference between Git and GitHub
- What is a commit

◆ Task 6: Add Additional File

Create any one:

- `about.txt` OR
- `contact.txt`

Include meaningful content

📌 Requirement:

- Do NOT add everything at once
- Work step-by-step (simulate real development)

□ PART 4: COMMITS

◆ Task 7: Make Multiple Commits

You must:

- Save your work in **multiple steps**
- Each save must have a **clear message**

📌 Example of good practice:

- First save → HTML file
- Second save → notes file
- Third save → update content

📌 *Important Rule:*
❌ One big save = LOW marks
✅ Multiple meaningful saves = FULL marks

□ PART 5: MERGING

◆ Task 8: Merge Your Work

- Combine your branch into your main branch

📌 *Goal:*
Your final work should appear in your main branch

□ PART 6: PUSH TO YOUR REPOSITORY

◆ Task 9: Upload Your Work

- Send your final project to your GitHub fork

📌 *Result:*
Your GitHub repository should contain:

- HTML file
- Notes
- Additional file
- Commit history

□ PART 7: PULL REQUEST

◆ Task 10: Submit Your Work

- Create a **Pull Request** to the instructor's repository

📌 Include:

- Clear title
- Short description of your work

📌 Example:

"Added student portfolio files and notes"

⚠ IMPORTANT RULES

- ❌ Do NOT work on main branch directly
- ❌ Do NOT submit empty or copied work
- ❌ Do NOT make one single commit
- ✅ Work step-by-step

- ✅ Write meaningful content
- ✅ Show understanding

✅ EXPECTED FINAL RESULT

Each student should have:

- A personal forked repository
- A feature branch
- Multiple commits
- Merged work into main
- A submitted Pull Request
